1. I used 11 variables in this lab.
2. I used 2 different variable types.
3. If the numbers involved decimal points, I used double whereas I used int where it did not involved decimals. For example, I used double for the cost of each product. Also, I used int to display the itemized list.
4. Println makes a new line and print does not.
5. I used println to make new lines.
6. It just makes a new line.
